

ABSTRACT OF THE DISCLOSURE

It is an object to provide a print service system capable of easily giving, from a moving destination, a print order of
5 a digital image photographed at the moving destination and immediately acquiring a necessary print.

A user requiring to print a digital image fetches digital image information to a mobile telephone 5 and transmits the digital image information, together with order request information, to
10 a print order receiving server through a network 1. The order request information includes print condition information. When receiving the digital image information and the print condition information, the print order receiving server 2 transmits digital image information to be printed to a printer server to be a printing
15 destination corresponding to a print condition. At the printing destination, an order print created based on the information transmitted to the print server is delivered to a registered delivery destination which is transmitted.
